## 2A DC／DC step－down device

## MH2564

## Description

The MH2564 is current－mode step－down DC－DC converter that generates up to 2A outputcurrent． consuming only $8 \mu \mathrm{~A}$ in shut down mode， The MH2564 is highly efficient with peak efficiency at $95 \%$ when in operation．Protection features include cycle－by－cycle current limit，the rmal shut down，and frequency fold back at short circuit．
The MH2564 is available in SOP－8 Package and requires very few external devices for operation．

Typical Application

## Features

2A Output Current
Up to $95 \%$ Efficiency
Up to 18 V Input Range
$8 \mu \mathrm{~A}$ Shutdown Supply Current
Up to $95 \%$ Efficiency
Fixed 210KHz Frequency
Adjustable Output Voltage
Cycle－by－Cycle OverCurrent Protection
Thermal Shutdown Protection
Frequency Fold Back at ShortCircuit
Stability with WideRange of Capacitors
Thermally Enhanced 8－Pin SOP Package

## Package

## 2A DC／DC step－down device

## Pin Assignment

| Pin No． | Pin Name | Descripition |
| :--- | :--- | :--- |
| 1 | BS | Bootstrap．This pin acts as the positive rail for the high－side switch＇s <br> gate driver．Connect a 10nF between this pin and SW． |
| 2 | IN | Input Supply．Bypass this pin to G with a low ESR capacitor．See <br> Input Capacitor in Application Information section． |
| 3 | SW | Switch Output．Connect this pin to the switching end of the inductor． |
| 4 | GND | Ground |
| 5 | FB | Feedback Input．The voltage at this pin is regulated to 1．22V．Connect <br> to the resistor divider between output and ground to set output voltage． |
| 6 | Compensation Pin．See Compensation Technique in Application |  |
| 7 | Information section． |  |
| 8 | EN | Enable Input．When higher than 1．3V，this pin turns the IC on．When <br> lower than 0．7V，this pin turns the IC off．Output voltage is discharged <br> when the IC is off．This pin has a small internal pull up current to a <br> high level voltage when pin is not connected． |
| 8 | NC | Not Connected． |

## Absolute Maximum Ratings

| PARAMETER | Value | Unit |
| :--- | :--- | :--- |
| IN Supply Voltage | $-0.3 \sim 18$ | V |
| SW Voltage | $-1 \sim \mathrm{VIN}+1$ | V |
| BS Voltage | VSW -0.3 to VSW +8 | V |
| EN，FB，COMP Voltage | $-0.3 \sim+6$ | V |
| Continuous SW Current | Internally limited | A |
| Junction to Ambient <br> Thermal Resistance（ $\theta \mathrm{JA}$ ） | 105 | ${ }^{\circ} \mathrm{C} / \mathrm{W}$ |
| Operating Junction <br> Temperature | $-40 \sim 150$ | ${ }^{\circ} \mathrm{C}$ |
| Storage Temperature | $-55 \sim 150$ | ${ }^{\circ} \mathrm{C}$ |
| Lead Temperature <br> （Soldering，10sec） | 270 | ${ }^{\circ} \mathrm{C}$ |

## Electronic Characteristics

VIN $=12 \mathrm{~V}, \mathrm{TA}=+25^{\circ} \mathrm{C}$ ，unless otherwise noted．

| Parameter | Symbo | Test Condition | Min | Typ | Max | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Input Voltage | Vin | $\begin{aligned} & \mathrm{VOUT}=5 \mathrm{~V}, \mathrm{ILOAD}= \\ & 1 \mathrm{~A} \end{aligned}$ | 6 |  | 18 | V |
| Input UVLO |  |  |  | 4.0 |  | V |
| Feedback Voltage | VFB | $\mathrm{VCOMP}=1.5 \mathrm{~V}$ | 1.196 | 1.22 | 1.244 | V |
| High－Side Switch On Resistance | RONH |  |  | 0.3 |  | $\Omega$ |
| Low－Side Switch On Resistance | RONL |  |  | 8 |  | $\Omega$ |
| SW Leakage |  | VEN $=0$ |  | 0 | 10 | uA |
| Current Limit | ILIM |  | 3 | 3.3 |  | A |
| COMP to Current Limit Transconductance | GCOMP |  |  | 1.8 |  | A／V |
| Error Amplifier Transconductance | GEA | $\Delta \mathrm{ICOMP}= \pm 10 \mu \mathrm{~A}$ |  | 550 |  | uA／V |
| Error Amplifier DC Gain | AVEA |  |  | 4000 |  | V／V |
| Switching Frequency | fSW |  | 190 | 225 | 240 | KHz |
| Short Circuit Switching Frequency |  | $\mathrm{VFB}=0$ |  | 50 |  | KHz |
| Maximum Duty Cycle | DMAX | $\mathrm{VFB}=1.1 \mathrm{~V}$ |  | 92 |  | \％ |
| Minimum Duty Cycle |  | $\mathrm{VFB}=1.3 \mathrm{~V}$ |  |  | 0 | \％ |
| Enable Threshold Voltage |  | Hysteresis $=0.2 \mathrm{~V}$ | 0.5 | 1 | 1.3 | V |
| Enable PullUp Current |  | Pin pulled up to 4.5 V typically when left unconnected |  | 1 |  | uA |
| Supply Currentin Shutdown |  | VEN $=0$ |  | 8 | 2.0 | uA |
| IC Supply Currentin Operation |  | $\mathrm{VEN}=3 \mathrm{~V}, \mathrm{VFB}=1.3 \mathrm{~V}$ |  | 0.7 |  | mA |
| Soft－start Period |  |  |  | 10 |  | ms |
| Thermal Shutdown |  |  |  | 150 |  | ${ }^{\circ} \mathrm{C}$ |

## Application Information

## 1．Setting the Output Voltage

The output voltage is set using a resistive voltage divider from the output voltage to FB （see Typical Application circuit on page1）．The voltage divider divides the output voltage down by the ratio ： $\mathrm{R}_{\mathrm{FB} 1}=\mathrm{R}_{\mathrm{FB} 2} \times($ Vout $/ 1.22 \mathrm{~V}-1)$

## 2．Inductor

The inductor is required to supply constant current to the output load while being driven by the Switched input voltage．A larger value inductor will resultin less ripple current that will result In lower output ripple voltage．However，the larger value inductor will have a larger physical size，higher series resistance，and／or lower saturation current．A good rule for determining the Inductance to use is to allow the peak－to－peak ripple current in the inductor to be approximately $30 \%$ of the maximum switch current limit．Also，make sure that the peak inductor current is Below the maximum switch current limit．The inductance value can be calculated by：

$$
L=\frac{V_{\text {OUT }}}{f_{S} \times \Delta I_{L}} \times\left(1-\frac{V_{\text {OUT }}}{V_{I N}}\right)
$$

Where VOUT is the output voltage，VIN is the input voltage，fSisthe switching frequency， and $\Delta I L$ is the peak－to－peak inductor ripple current．

## Typical Inductor Values

| Vout | 1.5 V | 1.8 V | $2.5 \mathbf{V}$ | 3.3 V | 5 V |
| :--- | :--- | :--- | :--- | :--- | :--- |
| L | 10 uH | 10 uH | 15 uH | 22 uH | 33 uH |

## 2A DC／DC step－down device

Output Voltages and Output Capacitors

| Vout | Cout | Rcom | Ccomp | Ccomp2 |
| :--- | :--- | :--- | :--- | :--- |
| 2.5 V | $22 \mu \mathrm{~F}$ Ceramic | $5.6 \mathrm{k} \Omega$ | 6.8 nF | None |
| 3.3 V | $22 \mu \mathrm{~F}$ Ceramic | $7.2 \mathrm{k} \Omega$ | 2.2 nF | None |
| 5 V | $22 \mu$ F Ceramic | $10 \mathrm{k} \Omega$ | 1.5 nF | None |
| 2.5 V | $47 \mu \mathrm{~F}$ SPCap | $15 \mathrm{k} \Omega$ | 1.5 nF | None |
| 3.3 V | $47 \mu \mathrm{~F}$ SPCap | $15 \mathrm{k} \Omega$ | 1.8 nF | None |
| 5 V | $47 \mu \mathrm{~F} \mathrm{SPCap}$ | $15 \mathrm{k} \Omega$ | 2.7 nF | None |
| 2.5 V | $470 \mu \mathrm{~F} / 6.3 \mathrm{~V} / 30 \mathrm{~m}$ | $15 \mathrm{k} \Omega$ | 15 nF | 1 nF |
| 3.3 V | $470 \mu \mathrm{~F} / 6.3 \mathrm{~V} / 30 \mathrm{~m}$ | $15 \mathrm{k} \Omega$ | 22 nF | 1 nF |
| 5 V | $470 \mu \mathrm{~F} / 6.3 \mathrm{~V} / 30 \mathrm{~m}$ | $15 \mathrm{k} \Omega$ | 27 nF | None |
